

ABSTRACT

A swab for cleaning electronic and electro-mechanical components includes a handle and a pull-truded fiber cleaning head. The handle is elongated and has a cleaning head end and a grasping end. The cleaning head end defines a securing
5 region for securing the cleaning head to the handle. The cleaning head is formed from a plurality of fibers that are pulled through a die to compress the fibers into a substantially rigid, elongated cleaning head. The swab includes a tether to secure the swab and prevent inadvertent misplacement.
